IS RECRUITING A PHENOTYPING PROJECT MANAGER

JOINING US

Means joining a team passionate about making image analytical tools accessible to crop breeders, producers, academics and NGOs developing solutions to tackle the challenges of 21st century agriculture.

Since 2014, Hipphen's team has been developing innovative Agtech solutions that allow agronomic experts to assess and improve the performance of their crop over time. From satellites to drones, robotics and artificial intelligence, Hipphen's technological innovation is recognized and exported worldwide.

Your main mission will be to support our community of crop researchers with the successful realization of their digital phenotyping projects. In this role, you will be interacting with a broad range of scientists and engineers across the globe and ensuring that they achieve the goals they have for advancing their efforts with Hipphen's image analysis tool suite.

 SITE : Avignon, France

 CONTRACT : Full time

 START : ASAP

Your missions:

- Manage phenotyping campaigns with our clients from protocol definition to data processing, results validation and reporting of conclusions;
- Onboard and train our clients in the use of Hipphen's digital tools ;
- Collaborate with our IT and R&D teams to ensure that the tools and methods developed meet the client's needs and are delivered on time;
- Analyze the agronomic measurements produced within the scope of the projects in order to produce analytical deliverables that respond to the problem statement and hypothesis;
- Pro-actively suggest innovative ideas to help us continually improve our tools, our efficiencies and the value we deliver to our clients.

Your profile:

- You have a PhD or a minimum of 3 years of professional experience in agriculture or related science;
- You are autonomous and rigorous, and wish to expand your skills by learning new methods;
- You speak English fluently and have very good writing skills;
- You know how to make "data talk" with proficiency in statistics, R or Python.
- You are organized and comfortable focusing a team of people on an objective.
- You have agile communication skills that allow you to effectively communicate with project members from a wide range of disciplines: executives, IT specialists, R&D leaders, field workers, data scientists and others.
